Executive summary

Business overview

Hakudo Co., Ltd. is a trading company specializing in non-ferrous metals (aluminum, copper, and stainless steel). In the decade to FY03/22, revenue ranged from JPY22.1bn (FY03/13) to JPY55.4bn (FY03/22). Operating profit was between JPY1.4bn (FY03/13) and JPY4.3bn (FY03/22). Over this same period, OPM ranged from 4.0% (FY03/20) to 7.7% (FY03/22). Performance fluctuates in line with changing market prices on the main materials the company handles (aluminum, copper, and stainless steel) and volatility in demand from the customers who purchase these materials (such as manufacturers of semiconductor fabrication equipment). As an example of this volatility, performance declined in FY03/20 because of falling semiconductor demand stemming from US–China trade friction, sluggish capex among manufacturers of semiconductor fabrication equipment, and deterioration in non-ferrous metal prices. In FY03/22, the market environment improved quickly, due to a rebound in non-ferrous metal prices and shortage of supply for semiconductor production equipment. Accordingly, performance also rapidly recovered.

In addition to its function as a trading company (buying and selling non-ferrous materials), Hakudo also processes materials into the sizes and shapes customers require. Revenue is based on market prices, with unit prices factoring in additional services (such as processing, delivery, and customer payment terms). In FY03/22, revenue was JPY55.4bn (+41.4% YoY). Aluminum accounted for 65.6% of this figure, copper for 13.5%, stainless steel for 16.6%, specialty steels for 1.7%, and other materials for 3.3%. For a trading company, the margin on the purchase and sale of goods is the basic source of profits. In addition, the company receives compensation for the convenience it offers (processing services and the speed of delivery) and profits from fluctuations in the purchase and selling prices of materials.

Hakudo was founded in 1932. As early as in 1968, the company introduced a computer system to manage information on customer demand, sales, and inventories. Around that time, customers began asking Hakudo to handle inventory control on their behalf, so the company began adjusting sales to provide each customer with just the amount of materials they required. Since the 1970s, the company has enhanced its factory and inventory management functions. To do so, Hakudo has expanded its facilities outside city centers and increased its product lineup. As of end-FY03/22, the company's print and online catalogs listed some 32,700 products for sale. Of this figure, around 5,300 were standard stock items (the company buys materials, which it machines and cuts into customer-required sizes and shapes) and another 27,400 were items stocked by other companies. To meet customers' requests for processing, the company has installed several hundred metalworking machines at its five factories throughout Japan and created a rapid-delivery system.

In addition to phone, fax, and email, the company provides estimates and accepts orders 24/7 via its online site, Hakudo Network Service. The company's customer accounts numbered around 13,000 as of FY03/21, and more than 10,000 of these were for companies registered to use the online service. Hakudo estimates that the majority of major companies handling semiconductor production equipment already have registered for this service. Hakudo handles around 20,000 inquiries and invoice requests each day and around half of these result in orders (excluding special-order items). In Japan, turnaround time (from ordering to processing and shipment) is fast. Products listed in the company catalog can often be delivered same-day or on the following day. Manufacturers of industrial machinery are key customers, as non-ferrous components are essential for their production. These manufacturers produce semiconductor fabrication equipment (Tokyo Electron Ltd. [TSE Prime: 8035], ULVAC, Inc. [TSE Prime: 6728], and their affiliates), OA equipment (Canon Inc. [TSE Prime: 7751], Ricoh Company, Ltd. [TSE Prime: 7752], and their affiliates), and precision instruments.

The company uses a proprietary computer system to determine selling prices for each customer. Prices are based on such factors as the quality of materials, market prices at the time of transaction, product quantity, processing details, customer order history, payment method, and the customer's creditworthiness. For products in the company's standard inventory, selling prices of aluminum products are affected significantly by the market price of aluminum at the time of sale. Similarly, the market price of electrolytic copper affects the selling price of copper products in standard inventory. Accordingly, the company faces the risk of valuation losses when it sells products as market prices are falling. The cost of manufacturing consists of the price of purchased parts and materials and the cost of processing them according to customer requirements. Major components of SG&A spending are the expenses of human resources in sales and administrative departments (363 employees as of end-FY03/22, of whom 119 were in sales) and transportation expenses. The company reports segment information by geographic location. In FY03/22, Japan accounted for 95.3% of revenue, China for 3.1%, and other locations for 1.6%. Similarly, Japan accounted for 95.4% of segment profit, China for 2.5%, and other locations for 2.1%.

The company's business is based on carrying inventory and leveraging the customer information it amasses to achieve short delivery times, but inventory turnover is relatively low: 8.1x in FY03/22 (around 1.5 month in inventory), compared with a wholesale industry average of 12.9x (Ministry of Economy, Trade and Industry). To increase profitability, the company adds value to its products through various types of processing. The company seeks to distinguish itself by handling a large number of items (32,700 including standard stock items, items produced to order, and special-order items) and achieving short delivery times while maintaining a processing function. Hakudo says this business model is rare for a trading company specializing in non-ferrous metals. One similar company, in terms of the standard stock item business, is UEX, Ltd. (TSE Standard: 9888). Alconix Corporation (TSE Prime: 3036) is similar to Hakudo in terms of special-order items.

As part of its efforts to address ESG/SDGs, the company has established an ESG/SDG management committee led by senior management. The company explains that by expanding the use of non-ferrous and environmentally friendly materials such as aluminum and cadmium-free brass, and by promoting their alternative use, it aims to help realize a low-carbon society and reduce industrial waste through recycling.

Earnings trends

FY03/22, the company generated revenue of JPY55.4bn (+41.4% YoY), operating profit of JPY4.3bn (+114.7% YoY), recurring profit of JPY4.4bn (+109.9% YoY), and net income attributable to owners of the parent of JPY3.0bn (+131.2% YoY). In terms of revenue, the company managed to limit the customer service degradation to a certain level by promoting the use of Hakudo Network Service and utilizing remote sales tools. The number of items listed on Hakudo Network Service was increased from 21,200 at end-March 2021 to 32,700 at the end-March 2022 to improve customer convenience. Gross profit was JPY10.3bn (+54.6% YoY) and GPM was 18.6% (+1.6pp YoY) thanks to increased revenue and the market prices of raw materials. SG&A expenses increased to JPY6.1bn (+29.1% YoY), but the SG&A expense ratio declined 1.2pp YoY. As a result, operating profit increased 114.7% YoY and OPM reached 7.7% (+2.6pp YoY). Inventory revaluation gains for the period were JPY610mn.

For FY03/23, the company forecasts revenue of JPY62.1bn (+12.0% YoY), operating profit of JPY4.0bn (-6.7% YoY), recurring profit of JPY4.1bn (-6.7% YoY), and net income attributable to owners of the parent of JPY2.9bn (-3.5% YoY). The company states that the outlook is uncertain because it is not clear when the COVID-19 pandemic will be brought under control and because Russia's invasion of Ukraine makes economic prediction difficult. In addition, since the market prices of raw materials are difficult to forecast, inventory revaluation effects are incorporated into the forecast only through Q1, and not through the entire fiscal year.

Hakudo released its medium-term management plan on May 26, 2022 (FY03/22–FY03/25) with a subtitle of "Moving forward, exceeding expectations." The company's long-term goal is to be a platform operator working to support the manufacturing industry, with sales of JPY100.0bn, recurring profit of JPY10.0bn, and an overseas sales ratio of 20% by FY03/32. The medium-term management plan positioned to achieve this, with management targets for the final year of the plan calling for revenue of JPY71.8bn (average growth rate of 9.0% over the plan period) and recurring profit of JPY5.4bn (7.3%), and key financial plan indexes being ROIC of 15%, operating cash flow of JPY4.7bn, and a dividend payout ratio of 40.0%. The company plans to cultivate its existing business in Japan, develop new businesses, and expand its overseas network.

Strengths and weaknesses

Strengths:

- 1) In addition to its inventory function (as a trading company), the company has a processing function, which helps lower customers' manufacturing costs.
- 2) The Hakudo Network Service is a highly convenient service that enables immediate order placement and delivery, using such data as market prices, processing costs, and customer information.
- 3) Accumulated customer data allows the company to manage inventories and control processing costs.

Weaknesses:

- 1) Impact from conditions in raw material markets is liable to grow because the company frequently serves specific customer groups.
- 2) A focus on small order quantities and rapid deliveries makes it difficult to achieve economies of scale in logistics and control logistics costs.
- 3) The company has limited ability to meet the needs of Japanese customers that are expanding overseas.

Q1 FY03/23 results

Summary

- Revenue: JPY16.1bn (+27.1% YoY)
- Operating profit: JPY1.2bn (+22.5% YoY)
- Recurring profit: JPY1.3bn (+23.5% YoY)
- Net income attributable to owners of the parent: JPY888mn (+23.8% YoY)

Changes in market conditions and demand

The Hakudo group's performance is affected substantially by continued expansion of demand for semiconductor production equipment due to the development of IoT, DX, and AI. Capex in this industry has been robust. In addition, despite some risk from the semiconductor shortage, the orders situation is improving in the machine tool sector, centering on exports. Capex remains sluggish, however, in the aircraft sector.

Given the constraints on customer visits and face-to-face sales, the company continued to promote the use of its 24/7 quotation and ordering website (Hakudo Network Service) and remote sales tools. These efforts helped the company to prevent customer service from deteriorating significantly. The company also worked to substantially increase the number of items listed on Hakudo Network Service (from 32,700 at end-March 2022 to 33,700 as of end-June 2022) and make the site more convenient. Revenue from two consolidated subsidiaries (AQR Co., Ltd. and Hakudo [Thailand] Co., Ltd.) increased YoY, while Shanghai Hakudo Precision Materials Co., Ltd. was affected by the lockdown in Shanghai (which lasted for about two months).

Financial results: Substantial increase in sales and profit

Revenue grew 27.1%, or JPY3.4bn, YoY. The rise in revenue was attributed to increased sales volume and unit prices of standard stock items (parent basis), the former contributing JPY586mn and the latter JPY1.4bn to revenue, and increased sales volume and unit prices of special order products (parent basis), with the former adding JPY738mn and the latter JPY612mn to revenue. Subsidiary and consolidation adjustments also contributed JPY116mn to the revenue growth. Of the increase in revenue, 58% was attributed to higher unit prices, 39% to increased sales volume, and 3% to other factors. In Q1, revenue from sales of standard stock items amounted to JPY9.9bn (+23.5% YoY), backed by a 17.4% and a 6.1% YoY increase, respectively, in unit prices and sales volume.

By customer industry, revenue growth (parent basis) was driven by sales to semiconductor and FPD manufacturing equipment makers (48% of Q1 revenue) and sales to other machine tools manufacturers (15%). By product category, revenue (consolidated basis) from sales of aluminum was JPY10.7bn (+29.8% YoY), sales of copper was JPY2.1bn (+18.3% YoY), sales of stainless steel was JPY2.6bn (+28.8% YoY), and sales of other JPY696mn (+12.0% YoY).

As of end-March 2022, market prices for key raw materials included JPY1,180,000/t for electrolytic copper (-11.3% from end-March 2022), JPY422,000/t for aluminum ingots (-13.5% from end-March 2022), JPY500,000/t for stainless steel (+20.0% from end-March 2022).

On the profit front, gross profit grew 18.1% YoY to JPY2.8bn, but GPM dipped 1.4pp YoY to 17.4%. While gross profit increased on higher revenue, the GPM fell as the company was slow to reflect the increase in transaction prices in selling price. The company said it will work to resolve these delays going forward. Also contributing to the decline in GPM was a JPY165mn (parent basis) increase in manufacturing costs, such as labor costs, included in the cost of revenue. SG&A

expenses rose JPY206mn YoY to JPY1.6bn, primarily due to a JPY198mn increase in parent SG&A expenses on higher shipping costs stemming from revenue growth. As a result, operating profit was up 22.5% YoY, while OPM was down 0.3pp YoY to JPY7.5%. Gains on inventory revaluation were JPY171mn (versus JPY104mn in Q1 FY03/22).

Performance by segment

- Japan: Segment revenue of JPY15.4bn (+28.3% YoY), operating profit of JPY1.2bn (+26.0% YoY)
- China: Segment revenue of JPY357mn (-14.8% YoY), operating loss of JPY11mn (vs. operating profit of JPY15.0mn in Q1 FY03/22)
- Others: Segment revenue of JPY290mn (+47.2% YoY), operating profit of JPY39mn (+18.2% YoY)

Hakudo's reporting segments indicate where its earnings were generated. Its Japan segment includes results stemming from the parent company and AQR Corporation, while its China segment reflects the performance of Shanghai Hakudo Precision Materials Co., Ltd., and its Others segment indicates earnings from Hakudo (Thailand) Co., Ltd. Revenue and profits arising from the company's collaboration with Oristar Corporation in Vietnam are included in the Japan segment as exports from Japan.

In Q1, revenue and profit increased in the Japan segment, thanks to robust performance of the parent on the back of strong sales to semiconductor and FPD manufacturing equipment makers and machine tool manufacturers. In the China segment, revenue fell as performance of the mainstay subsidiary in Shanghai was affected by citywide lockdowns, failing to cover the fixed costs and leading to an operating loss. In Others, performance of the Thai subsidiary improved.

Net margin	2.4%	4.0%	3.3%	5.2%	5.4%	5.3%	4.7%	4.6%	4.6%

Hakudo stated that making earnings projections was difficult due to uncertainties in when the pandemic will end and the impact of the Russian invasion of Ukraine. Versus the 1H FY03/23 forecast, Q1 revenue reached 52.3%, operating profit 61.6%, recurring profit 62.4%, and net income 62.1%. The company says Q1 results were largely in line with the plan. The company maintained its full-year forecast at the time of full-year FY03/22 results announcement, in light of its planned selling price revisions in 2H based on its formula for calculating transaction prices for aluminum products and others (methods for calculating transaction prices that also take into account fluctuations in additive metal prices). The full-year forecast is as follows.

The earnings forecast released together with the FY03/22 results calls for revenue of JPY62.1bn (+12.0% YoY), operating profit of JPY4.0 (-6.7% YoY), recurring profit of JPY4.1bn (-6.7% YoY), and net income of JPY2.9bn (-3.5% YoY).

The company projects a decline in profits for the full year due to difficulty predicting the global trends and raw materials market conditions, as well as uncertainties regarding the methods of calculating transaction prices and determining selling prices. Further, the company expects inventory valuation gains for the full year to solely comprise the JPY171mn recorded in Q1.

Source: Shared Research based on company data

Substantial differences between forecasts and results occurred in FY03/13 and from FY03/18 to FY03/22.

In FY03/13, as in the previous year, Japanese manufacturing capex was sluggish due to a global economic slowdown caused by yen appreciation and the European financial crisis.

In FY03/18, brisk sales to customers in the semiconductor production equipment industry (a key customer segment) led to higher-than-expected revenue. Profit outstripped company expectations, due to higher revenue and favorable raw materials prices. Performance declined in FY03/19, rebounding negatively from strong performance in semiconductors the year before. Semiconductor memory prices fell, the supply/demand gap loosened, and capex in the semiconductor industry entered an adjustment phase. The LCD manufacturing equipment industry also decelerated rapidly. In FY03/20, semiconductor demand was sluggish as a result of US–China trade friction, causing lackluster results in the semiconductor production equipment sector. These factors, plus a deterioration in raw materials prices, lowered company profits.

In FY03/21, the company expected performance to be affected significantly by the COVID-19 pandemic. However, in 2H, demand for semiconductors began to pick up due to an increase in ICT applications, such as IoT, AI, and 5G. This situation caused the market for semiconductor production equipment to expand, and raw materials prices rose, pushing performance beyond initial expectations.

Two upward revisions were made during FY03/22. In August 2021, the revision was mainly due to a lower cost of sales ratio on the back of higher revenue, as well as the impact of raw materials prices. In December 2021, demand exceeded initial forecasts for the semiconductor production equipment industry, which is the company's main area of business. With the soaring prices of raw materials and increased demand for semiconductor production equipment, both sales and recurring profit reached record highs.

Medium-term management plan: Moving forward, exceeding expectations (FY03/23–FY03/25)

Hakudo released its medium-term management plan on May 26, 2022 (FY03/23 - FY03/25) with a subtitle of "Moving forward, exceeding expectations." Although the company had conveyed the direction of specific measures by FY03/22, this is the first time announcement of a comprehensive company-wide business strategy with specific targets.

Company Vision

Hakudo's vision is to be a platform operator working to support the manufacturing industry. To differentiate itself from competitors, "exceptional quality, speed and service at a satisfying price" is at the core of its business strategy. The company envisions itself supporting global manufacturers by expanding the business model it has developed in Japan to overseas markets.

The main regions it will target are Asia and North America. In addition to Hakudo's own and other companies' inventories, parts and molded items which it currently handles, it plans to handle subsidiary materials and tools, as well as commercialize processing with 3D printers. In FY03/32, 10 years on from initiating its plan, the company has set targets for revenue of

JPY100.0bn, recurring profit of JPY10.0bn, and an overseas sales ratio of 20%. The company considers this most recent medium-term management plan as a step towards actualizing its Vision.

Management targets

The management targets set for the final year of the medium-term management plan are revenue of JPY71.8bn (average growth rate of 9.0% over the plan period), recurring profit of JPY5.4bn (growth rate 7.3%), and key financial plan indexes being ROIC of 15%, operating cash flow of JPY4.7bn, and dividend payout ratio of 40.0%. Plans include enhancing existing businesses in Japan, developing new businesses, and expanding the company's network overseas.

Medium- Term Management Plan Targets

(JPYmn/%)		FY03/22	FY03/23	FY03/24	FY03/25
		Act.	Est.	Plan	Plan

Policies

Enhancing core businesses

Manufacturers of semiconductor production equipment currently account for a large percentage of sales (45% of domestic revenue in FY03/22). The company believes it needs to diversify its business by cultivating new customers. The company plans to step up business in the aircraft and automotive fields, as these sectors take advantage of aluminum's light weight and recyclability. The company also believes aluminum will be important to achieving SDGs, as the metal has characteristics that contribute to reducing environmental impact.

Strengthening the Hakudo Network

First, the company will work to augment its product lineup. The company has already expanded its own inventory. It will expand its top line of standard stock items by increasing the stock it handles from other companies, along with introducing environmentally friendly products (ECO series) and high value-added products. In addition, Hakudo will collaborate with other companies to expand its product lineup to include not only non-ferrous metal materials, but also tools and other materials that support manufacturing sector needs.

Next, though currently only the company has access to its Hakudo Network Service, it plans to expand the network's coverage to include distributors. Hakudo will promote its online estimate and ordering system by having distributors use the service directly, as well as promote its combined use with enterprise resource planning.

The company will also work to improve the profit margin of the service. Specifically, it plans to increase the degree of milling of the components it sells, boost sales of high-margin products, and improve the rate of small and medium orders.

Enhancing processing performance and supply capacity

To start, the company will boost the processing capacity of its factories, expanding its ability to provide services. In addition, for component processing services, the company will enhance its virtual supply capacity by building alliances with other processing companies and expanding its network of partner factories. In addition, it plans to differentiate its parts processing service by improving customer convenience through efforts like using CAD data to automate part quotations.

Reform supply chain management to enhance procurement and supply capabilities

Hakudo plans to introduce a purchase management system to improve ordering efficiency and inventory management while reducing management expenses. It will also introduce a system to standardize operations among factories and reduce labor, thereby cutting costs and making delivery more efficient. Depending on market trends, Hakudo may consider the merger of existing companies and expansion of supply capacity by adding new factories.

Expanding into growth business fields: semiconductors, aerospace, automotive

The company intends to enter these growing fields, forming a sales organization for each one and utilizing an inventory management system for special-order items to help attract and retain customers. The company will develop products tailored to demand trends specific to each field. This includes the development of new environmentally friendly materials for its ECO material series for the semiconductor field, the expansion of its line of aviation industry materials for the aerospace field, and the development of new technologies in collaborations with industry and academia for the automotive field.

Regarding the development of its processing system, the company has begun contract manufacturing of metal products using 3D printers for the automotive field, and has launched efforts to become a convenient source of aerospace-standard materials. The company's Kanagawa and Shiga factories have acquired JIS Q9100 certification, meeting specific aerospace industry requirements. In January 2020, the company introduced a water jet used for cutting any material into any shape desired, and the company expects it will be of value in the aerospace and aviation fields.

Expanding overseas business and entering new markets

The company already conducts business through its regional subsidiaries in Thailand and Shanghai, China. In Vietnam, it works with Oristar Corporation (unlisted), a major local non-ferrous metals trading company, with business focusing on Oristar's inventory. In the regions where Hakudo is already established, it is developing strategies based on the extent of its presence. Hakudo Network Service has already been introduced in China, and the company plans to expand its product lineup of subsidiary materials and tools, as well as its processing capacity. In Thailand, it has plans to strengthen its logistics network, and in Vietnam, it will expand the products it handles to include other companies' stock items, subsidiary materials, and tools. It plans to introduce the Hakudo Network Service in both countries.

New regions the company plans to enter through alliances with local companies include South Korea, Taiwan, and the US. It also intends to introduce the Hakudo Network Service in all of these regions, with a product lineup that will include its own and other companies' stock items, as well as subsidiary materials and tools. In the US, the company plans to expand its processed items on offer as well as processing capabilities.

Strengthening of management base

Enhancing digital platforms

Hakudo will reform its operating processes by introducing new digital technologies. This includes utilizing AI to improve the efficiency of customer service operations; it will also leverage its DX Promotion Project to make operations more efficient by going paperless and boost efficiency through the use of RPA and IoT for in-house back office operations and manufacturing site operations.

To strengthen intellectual property strategies, it will take specific measures to develop the Hakudo Network Service in Japan and overseas. To start, it will strengthen structures and register rights required to provide and use the Hakudo Network Service and related intellectual property overseas.

Bolstering human resources (expand procurement, further train existing staff, improve engagement)

To implement these measures, the company understands the need to procure more talent and boost the skill level of its current staff. Starting with the strategic procurement of talent needed to execute Hakudo's strategies, the company will clarify requirements by introducing human resource skill maps, raise their skill levels by expanding the training system, and enhance their development through establishing an HR department. In addition, it will improve employee satisfaction by implementing work style reforms.

Strengthen PDCA management for strategy effectiveness

Hakudo will enhance progress management to make its medium-term management plan feasible. It plans to utilize measures like target management charts to help maximize recurring profit. It will also introduce multifaceted corporate management using indicators like ROIC and cash flow in addition to income statements.

Strengthen governance

Hakudo will do this to enhance corporate value over the medium to long term. Specific measures include further strengthening the following: management and supervisory functions of directors; executive structure and functions

(management committee members); sustainability management to increase corporate value over the medium to long term; and the company's information security system, including through the acquisition of ISMS certification (ISO27001).

Sustainable management

Basic policy

The company has formulated a new Basic Sustainability Policy that balances the enhancement of corporate value with working towards a sustainable society. Its content is as follows.

1. Deepening Hakudo's understanding of sustainable management as concerns ESG and SDGs, and contribute to the environment and society through its business.
2. Striving to give due consideration to nature and the global environment, helping prevent global warming, and creating a recycling-oriented society.
3. Promoting the health of employees while recruiting a diversity of human resources and recognizing a variety of training and working styles.
4. Work to improve the health, efficiency, and transparency of the Group and reduce various risks.
5. Endeavor to strengthen relationships with stakeholders involved in the Group's business.
6. Undertake initiatives toward the realization of a society in which everyone can live with peace of mind.

Initiatives

In line with the Basic Sustainability Policy outlined above, the company will address the following material issues with a goal of contributing to society and sustainably increasing corporate value. The company has established an ESG/SDGs Management Committee consisting of six subcommittees, which will play a central role in promoting these initiatives.

Sustainable management issues and initiatives

Major material issues		Specific Initiatives	Related SDGs Goals
1 Reducing environmental impact and responding to climate change	In addition to reducing the business's environmental impact, Hakudo will contribute to society through providing environmentally friendly products	<ul style="list-style-type: none"> • Reducing CO2 emissions • Reducing waste and conservation of resources 	379,111,213
2 Building an environmentally responsible supply chain	Hakudo takes environmental responsibility seriously through its efforts to build a sustainable supply chain	<ul style="list-style-type: none"> • Offering more environmentally friendly products • Promoting green procurement • Strengthening relationships with suppliers • Respecting human rights 	81,213
3 Social initiatives	Hakudo creates new value through its partnerships and contributes to local communities	<ul style="list-style-type: none"> • Contributing to local communities • Collaborating with industry and academia 	4,911
4 Investing in people	Hakudo strives to be organization that's easy to work for and with, where a diversity of talent gains satisfaction from their work	<ul style="list-style-type: none"> • Increasing employee satisfaction • Promoting diversity • Creating a healthy and pleasant work environment • Improving employee education 	345,810
5 Corporate governance	Through thorough compliance and risk management, Hakudo seeks to run its business operations smoothly	<ul style="list-style-type: none"> • Bolstering compliance • Improving information security • Thorough risk and crisis management 	3,111,216

Source: Shared Research based on company data

Investment plan

The key strategy policies above can be broadly categorized into three fields: strengthening supply capacity and enhancing processing capabilities, strengthening M&A and alliances, and strengthening digital transformation and the Hakudo Network Service. Investment during the planning period for these three fields is as follows.

Investment plan per item

Investment items	Investment amount (JPYmn)
Enhancement of supply capability and machining functions	4,500
Strengthening of M&A activities and alliances	2,500
Further digital transformation and enhancement of Hakudo Network Service	1,000
Total	8,000

The key strategic policies regarding strengthening supply capacity and enhancing processing capabilities are to develop a network of processing companies, to enhance procurement and supply capabilities through SCM reform, and to expand fields of growth while boosting sales and marketing. Expansion of overseas business is a key policy regarding strengthening M&A and alliances. For strengthening digital transformation and the Hakudo Network Service, the key policies are to fortify and expand the customer base and improve profitability by further developing the Hakudo Network Service while improving the digital platform to boost corporate value.

Business model

Overview

The company's business centers on vendor-managed inventory (VMI). The company buys non-ferrous materials (such as aluminum and copper) cuts them into standard sizes and shapes, and supplies them to customers in accordance with their specifications. The company carries approximately two months of inventory worth of standard stock items. One difference from other providers of VMI services lies in the company's extensive processing capabilities, allowing it to machine items to customer specifications. VMI arrangements typically work by suppliers and purchasers sharing inventory information. In Hakudo's case, purchaser's inventory information is based on customer order histories.

The company believes the factors that differentiate it from competitors include better product quality, and more attractive delivery times. The company's brand promise is "exceptional quality, speed and service at a satisfying price." The company places great importance on the quality of its materials and processing services, as well as on meeting the deadlines specified in its product catalogs. The company adds value with its inventory and processing functions.

Performance fluctuations in tandem with market prices for key materials and changing customer demand

In the decade to FY03/22, revenue ranged from JPY22.1bn (FY03/13) to JPY55.4bn (FY03/22). Operating profit was between JPY1.4bn (FY03/13) and JPY4.3bn (FY03/22). Over this same period, OPM ranged from 4.0% (FY03/20) to 7.7% (FY03/22).

Performance fluctuates in line with changing market prices on the main materials the company handles (aluminum and copper) and volatility in demand from the customers who purchase these materials (such as manufacturers of semiconductor production equipment). As one example of this volatility, the company's performance declined in FY03/20 due to a downturn in economic activity resulting from the COVID-19 pandemic. In FY03/22, the market environment improved quickly, due to a rebound in non-ferrous metal prices and shortage of supply for semiconductor production equipment. Accordingly, the company experienced a healthy 41.4% YoY rise in revenue and a 114.7% YoY increase in operating profit for the year.

Business overview

Customers

The company's main customers are manufacturers of semiconductor production equipment, OA equipment, and other industrial machines. The company does not disclose sales by customer. Semiconductor production equipment uses large quantities of aluminum, whose corrosion resistance, machining accuracy, and low gas generation suit it to this application. Demand for semiconductor production equipment is rising, owing to a global semiconductor shortage. In FY03/21, aluminum accounted for 66% of the company's revenue.

Among Hakudo's customers are manufacturers of semiconductor production equipment (that use aluminum components in their vacuum chambers), precision instruments such as OA equipment, and various industrial machines.

Hakudo says it has 13,000 customer accounts; Shared Research assumes the actual number of active accounts is lower. The company has more than 10,000 customers registered to use its online Hakudo Network Service. Shared Research estimates that the company does business with around 10,000 customers per day, also including those that place orders by phone and fax (which the company explains tend to be special-order items). In FY03/22, revenue totaled JPY55.4bn. Assuming 250 business days a year, the average order size calculates to around JPY22,000. The company provides delivery services tailored to each customer's needs, regardless of order size, so orders are small compared with companies that handle steel products in bulk. Hakudo notes that a large-volume customer will generate around JPY2.0bn per year.

Adding value through processing and maintaining standard stock items

Rather than selling purchased materials as is, the company cuts them into specific sizes and shapes (standard stock items) before selling them. Once placed in inventory, these items are valued at market prices. Transaction prices are based on market prices at the time of sale, so the company can face valuation losses if market prices change while products are in inventory. Among its main materials, aluminum prices are updated every three months, while copper prices change daily. The company adjusts purchasing decisions based on market prices, inventory levels, and customer demand trends.

Method for determining unit transaction prices

To determine transaction prices, the company starts with the market price of the target material. To this, it adds a trading company margin, processing fees, the customer's portion of shipping costs, and a margin based on customer payment conditions. If multiple pieces of aluminum materials are ordered, the price is calculated as follows.

First, the unit price is determined, based on the market price per weight of aluminum (JPY415,000/ton as of end-March 2022). Next, a customer-specific transaction price is calculated by taking into account various fees (including inventory costs), processing fees for parts and materials, the customer's purchase/payment history, and credit information. The unit price is then multiplied by the number of items. For similar companies that do not offer processing services, the transaction price is simply the market price of the raw material plus a trading company commission.

Flow of business

Hakudo purchases non-ferrous materials from external suppliers and holds them in inventory (standard stock items). The company maintains around 5,300 standard stock items. Customers can also backorder items that the company does not keep in stock. Backorder items are those the company does not typically handle and whose volumes are too small to keep in inventory.

Hakudo purchases non-ferrous materials from external suppliers and holds them in inventory (standard stock items). The company maintains around 5,300 standard stock items. Customers can also backorder items that the company does not keep in stock. Backorder items are those the company does not typically handle and whose volumes are too small to keep in inventory.

Purchasing

The company buys non-ferrous materials from specific suppliers in Japan. The material Hakudo buys the most of is aluminum, which it purchases from large companies such as UACJ Corporation (TSE Prime: 5741) and Nippon Light Metal Holdings Co., Ltd. (TSE Prime: 5703). Hakudo purchases copper from a range of Japanese and overseas manufacturers, such as Mitsubishi Materials Corporation (TSE Prime: 5711) in Japan. To diversify supply risk, the company does not limit its suppliers to specific companies, except in the case of specialized parts.

According to the Japan Aluminum Association, high electricity prices mean that Japanese production of primary aluminum ingots has not been cost-competitive since the two oil shocks the country faced in the 1970s. As a result, the country is entirely dependent on imports for new aluminum ingots. Japanese production centers on secondary (recycled) aluminum ingots, which are imported from overseas and processed in Japan into plates, extrusions, and foils. Processed aluminum materials are then supplied to manufacturers of final products such as transport equipment and construction-related equipment.

"Copper" products may include products made solely from copper or alloys containing zinc, tin, or nickel before being melted, cast, rolled, drawn, or forged into plates, tubes, bars, wires, or other shapes. The Japan Copper and Brass Association estimates FY2022 demand for products made from copper and copper alloys at 791,800 tons (+2.4% YoY).

Because it maintains standard stock items in inventory, the company can anticipate a certain level of steady sales from customers. It has no such relationships on the supply side, however, so has little negotiating power there. The company explains that it has established a stable supply system by purchasing from multiple sources.

Inventory (processing of standard stock items)

The company classifies procured metal materials as “standard stock items.” The company handles around 5,300 standard aluminum products, which are divided into shapes such as plates, bars, and tubes, and each has its own standard dimensions and thickness.

For aluminum products, the company purchases sheets, strips (coiled), rods, and tubes of aluminum alloy from manufacturers of these materials, and keeps them in inventory. Aluminum alloy plates in inventory (base material) tend to be around three sqm in size. Processing and inventory management take place at five factories in Japan (in Fukushima, Saitama, Kanagawa, Shiga, and Kyushu; outlined below).

Order receipt, sales

In general, the flow from order to shipment follows the steps below.

The company receives an estimate request or order via telephone, fax, e-mail, or online service. Order data is entered into the company’s “comprehensive information system (proprietary computer system)” at the East Japan Customer Center, West Japan Customer Center, or each of its sales offices. Data is then sent to individual factories as shipment order forms. Bar codes are printed onto shipment order forms to ensure traceability.

Printing a shipment order form (factory)

Source: Company website

Depending on the order, cutting may be performed at the factory instructed to handle the shipment. Cutting takes place at five factories in Japan. The company has approximately 200 cutting machines (including circular saws, band saws, shears, and contour machines). The same five factories also handle milling (machining of complex shapes and drilling), using general-purpose and specialized machines (more than 200). Other processes include deform/machining, polishing, and chamfering.

Machining processes (cutting, milling)

Source: Company website

Contour machine processing machining

rotary polishing

Source: Company website

After machining is complete, the product is inspected. Dimensions may be measured using 3D measuring instruments or manually, according to the customer's request. After inspection, the product is packaged for delivery. Packaging specifications vary depending on the variety, shape, and processing service. The company aims to provide the best packaging it can to maintain product quality. The company uses a barcode system to perform final checks on unloads and delivery addresses, and then delivers the goods quickly using its own trucks, route-based services, and in some cases, couriers.

Shipment and delivery

Source: Company website

Hakudo Network Service

This service accounts for around 80% of orders. Customers can login (or register as new users) via the Hakudo Network Service portal on the company's website. The system offers three types of entry mode: standard, simplified, and multiple

detail. New customers and those unfamiliar with online ordering tend to choose the simplified mode, which is limited to standard products. The multiple detail entry mode allows customers to place orders involving detailed machining requests and attach Excel or CSV data, ordering up to 15 items at a time.

Sales structure

Hakudo divides Japan into eight regions and has a sales office for each: the Sendai Sales Office (located in Sendai, Miyagi Prefecture, and responsible for the Hokkaido and Tohoku regions), the Takasaki Sales Office (located in Takasaki, Gunma Prefecture, and responsible for the Joetsu and Northern Kanto regions), the Tokyo Sales Office (located within headquarters and responsible for the Tokyo metro area), the Atsugi Sales Office (Atsugi, Kanagawa Prefecture), the Nagoya Sales Office (located in Nagoya, Aichi Prefecture, and responsible for the Tokai and Hokuriku regions), the Osaka Sales Office (located in Osaka and responsible for Wakayama Prefecture and the Kyoto/Osaka/Kobe region), the Hiroshima Sales Office (located in Hiroshima and responsible for the Chugoku and Shikoku regions, except for Yamaguchi Prefecture), and the Kyushu Sales Office (located in Tosu, Saga Prefecture, and responsible for the Kyushu region, including Yamaguchi Prefecture). Located within headquarters is the Sales Department of Special Order Products, which serves large manufacturing customers nationwide. The Sales Department of Standard Stock Products maintains two call centers, the East Japan Customer Center (Kawasaki) and the West Japan Customer Center (Osaka), as well as the Shizuoka Branch Office.

Sales offices in Japan

Office	Location	Area covered
Sendai Sales Office	Sendai, Miyagi Prefecture	Hokkaido and Tohoku
Tokyo Sales Office	Chiyoda-ku, Tokyo	Tokyo metro
Takasaki Sales Office	Takasaki, Gunma Prefecture	Joetsu and Northern Kanto
Atsugi Sales Office	Atsugi, Kanagawa Prefecture	Southern Kanto and Chubu
Nagoya Sales Office	Nagoya, Aichi Prefecture	Tokai and Hokuriku
Osaka Sales Office	Osaka	Wakayama Prefecture, Kyoto/Osaka/Kobe
Hiroshima Sales Office	Hiroshima	Chugoku and Shikoku (excl. Yamaguchi Prefecture)
Kyushu Sales Office	Tosu, Saga Prefecture	Kyushu (incl. Yamaguchi Prefecture)

Factories in Japan

The company has five factories in Japan.

- ▶ Fukushima Factory (Koriyama, Fukushima Prefecture): Has grinding/polishing and machining equipment and conducts these processing for the company.
- ▶ Saitama Factory (Kazo, Saitama Prefecture): Mainly handles cut-to-length stock, extruded aluminum, copper pipe, and shaped copper and stainless steel (rectangular bars and small-diameter rods).
- ▶ Kanagawa Factory (Atsugi, Kanagawa Prefecture): This center has the largest product lineup in the Hakudo group, as well as the largest inventory and shipping volumes. This center functions as a core factory for the group, working to increase the quality of products the group handles and augment the group's technologies.

- ▶ **Shiga Factory (Gamo-gun, Shiga Prefecture):** This factory handles a diverse lineup of products. The factory maintains inventories of aluminum plates ranging in thickness from 1mm to 350mm and cuts/machines this stock to customer requirements. The facility has water-jet cutting and machining equipment.
- ▶ **Kyushu Factory (Tosu, Saga Prefecture):** At this location, the company focuses on maintaining close ties with local businesses, working alongside salespeople to reflect customer feedback in its product quality, technologies, and services.

Factories (“process centers”) in Japan

Factory	Location	Characteristics
Fukushima Processing Center	Koriyama, Fukushima Prefecture	Polishing and machining equipment
Saitama Processing Center	Kazo, Saitama Prefecture	Cut-to-length board, extruded aluminum, copper pipe, copper, stainless steel
Kanagawa Processing Center	Atsugi, Kanagawa Prefecture	Group's largest product lineup and inventory/shipping volumes
Shiga Processing Center	Gamo-gun, Shiga Prefecture	Large stock of aluminum plates, water-jet cutting and machining equipment
Kyushu Processing Center	Tosu, Saga Prefecture	Close ties to the local businesses

Overseas locations

In China, the company has its own inventory and processing centers with sales offices in Guangzhou and Tianjin, as well as a consolidated subsidiary in Shanghai (Shanghai Hakudo Precision Materials Co., Ltd.). In Thailand, Hakudo has a subsidiary, Hakudo (Thailand) Co., Ltd, as well as a local partner, Fujimaki Steel (Thailand) Co., Ltd. In other ASEAN countries, the company is collaborating with local partners in Vietnam (Oristar Corporation), Malaysia (PHH Special Steel SDN BHD), and Indonesia. It also has established a representative office in Vietnam. The table below indicates the company's overseas locations.

Process for determining transaction prices

The company refers to market prices at the time of transaction to calculate transaction prices. A problem can arise due to a gap between the market price of the product at the time of sale and the price at which the original material was purchased. In particular, the company may face a loss if the market price of the material declines (the risk of holding items in inventory). When market prices are rising, transaction prices are based on the most recent market price, so marginal gains may occur. When market prices are falling the mechanism for determining transaction prices results in a net loss.

The company does not adjust purchases based on market trends, unless it is certain that transaction prices will rise or fall. However, the company minimizes marginal losses through efficient processing (minimizing the amount of scrap generated when processing standard products) and by offering selling prices that take credit information (based on customers' payment histories) into account. The company uses an integrated information system (which it calls the “proprietary computer system”) to manage information centrally. The company uses this system to direct operations related to inventory, adjusting stock levels to meet assumed demand and minimize differential losses.

Product lines

As of end-FY03/22, the company catalog listed 32,700 items for sale, including standard stock items and backorder items. The main items are described below.

Standard stock items

These are items the company keeps in stock at its factories around Japan. Currently, the company maintains 5,300 standard stock items. Cover images of the product catalogs (standard stock items) on the company website are shown below. The

English version was published in 2018; the Japanese version is from 2021.

Catalogs of standard stock items (English on the left, Japanese on the right)

Source: Company website

Hakudo explains that its standard stock items benefit customers in six ways. First, the lineup is extensive. The company specializes in non-ferrous metals such as aluminum and copper, as well as stainless steel, titanium, specialty steels and plastic materials, and provides processed industrial materials. The company offers around 5,300 standard products.

The second advantage is the ability to fill small-lot orders. The company machines materials based on a single plate, piece, or gram to the customer's desired size and shape, and delivers products throughout Japan. The company's policy is to cut and process small materials down to 5 x 5mm to the exact dimensions specified by the customer, and deliver the required quantity as soon as the next business day.

The third advantage is quick response. From customer centers located in eastern and western Japan, the company responds quickly to quotations, orders, and inquiries via fax, phone, e-mail, and online. In sales, the company has a policy of not keeping the customer waiting. Professional staffers at customer centers using leading-edge IT systems provide prompt quotes on both standard stock items and special-order items.

The fourth advantage is quick delivery. The company maintains inventory and processing centers ("factories") at five locations across Japan, and can deliver products as soon as the day after it receives an order. The company has a system in place to ship orders to customers from each center by the most appropriate means, depending on delivery distance and inventory status.

The fifth advantage is the wide variety of machining options. In addition to cutting products to customer-specified dimensions, the company offers milling and polishing services for all products in its inventory. The company provides 34 types of cutting and processing methods to offer products with the shape and accuracy desired by customers. The company is capable of cutting various shapes (squares, circles, and rings), milling and polishing to specified dimensions in increments of 0.1mm, and machining shaped parts using machining centers and water jet cutting machine.

The sixth advantage is high-precision machining. For its milling and polishing processes, the company guarantees accuracy in terms of thickness, width, length, squareness, angularity, and flatness. The company has installed the latest equipment, including specially designed high-precision milling machines and machining centers, to meet the demands of its customers. The company is also researching and seeking to improve its machining processes and inspection methods to further increase machining accuracy.

Items handled (standard stock items)

Aluminum

Aluminum products (standard stock items on the left and backorder items on the right)

Source: Company website

Standard aluminum stock items are classified broadly by shape (plates, bars, and tubes), and then classified further in terms of size and material.

The example below is a catalog entry for a standard stock item. “A1050” is a standard 1000 grade aluminum (pure aluminum), 99.5% pure aluminum sheet (1,000mm by 2,000mm), commonly referred to as “meter sheet*.” Catalog entries are listed by size.

Catalog listing of “A1050” aluminum plate item (English at left, Japanese at right)

Source: Company website

The Japanese version (but not the English version) indicates the weight per sheet (kg) and uses color to show which of the company’s five factories produces and stocks the product.

* “Meter sheet” refers to a type of cut-to-length stock measuring 1,000mm by 2,000mm.

The main types of steel plate and plate-metal materials used in precision plate metal and plate-metal processing are distributed in the market as cut-to-length stock of specific dimensions. Typical plate sheet sizes are 3 x 6 (914mm x 1,829mm), 3 x 8 (914mm x 2,438mm), and 5 x 8 (1,524mm x 2,438mm). These standard sizes are generally not used for stainless steel, aluminum, copper, and brass plate. Instead, these materials are typically found in “meter sheet” dimensions (1,000mm x 2,000mm), which are not used for steel sheet.

The 4 x 8 size (1,219mm x 2,438mm) is generally used for steel, stainless steel, aluminum, copper, and brass plate. This size of material is used to make large plate metal products, for which 3 x 6 and 1 x 2 sizes would be too small. The 5 x 10 size (1,524mm x 3,048mm) is also used for steel plate but generally not for copper or brass plate.

Copper products

Copper products (standard stock items at left, backorder items at right)

Source: Company website

The company lineup also includes copper plates, bars, and tubes. Due to its high electrical and thermal conductivity, durability, and color, copper is used in a wide range of applications. Copper is frequently used in air conditioning (copper pipes) and electronic components (semiconductor lead frames). Standard stock items are categorized broadly into plates, bars, and tubes, and further classified according to size and material quality.

The following example is a product called “chrome copper round bar,” which is an alloy of copper and chrome with extremely high electrical conductivity and hardness. It has excellent wear resistance at high temperatures and good toughness due to its uniform microstructure. This product is mainly used for welding electrode materials, electrode materials, cooling parts for connector equipment, die-casting molds, and various machine parts (parts requiring thermal conductivity and electric conductivity).

As with aluminum, the Japanese version of the catalog (but not the English version) indicates the weight per sheet (kg) and uses color to show which of the company's five factories produces and stocks the product.

Stainless steel

Stainless steel products (standard stock items at left, backorder items at right)

Source: Company website

“Rust-resistant iron” is made by adding nickel, chrome, or other substances to iron. Due to its rust resistance, this material is often used in food machinery and kitchen equipment, as well as for decorative piping for railings and monuments. The material is finding growing use in machine parts, and the company believes demand will increase further as new applications for the material are developed.

The following example is a catalog entry for structural stainless steel extruded pipe. The material is called “304 seamless round pipe (TKA)” TKA refers to mechanical-structural stainless steel pipe. In machined items, this product is used as thick-walled pipe (such as pipe made from hollowing out round stock or sheet materials).

Catalog entry for seamless round stainless-steel pipe (English at left, Japanese at right)

Other products (ordinary steel, specialty steel, titanium, plastic)

Source: Company website

Ordinary and specialty steels are made by adding carbon and other substances to iron to increase its hardness. The company offers a wide variety of products for different applications. Traditionally used for knives and tools, in recent years these materials have also been used for molds that require hardness (ultra-precision molds for IT-related products).

Titanium is lighter, stronger, and more corrosion-resistant than other metals. It has a wide range of applications, including in the aerospace industry.

The company handles a wide variety of plastic materials, from general-purpose plastics (PVC, acrylic) to engineering plastics. Engineering plastics, which have enhanced hardness and resistance to heat and chemicals, are used in a wide range of applications because they have the advantage of being lighter than metals.

Backorder items and special-order items

Standard stock items are held in stock at company factories. Alongside these items, customers can place orders for backorder and special-order items, which Hakudo may then order from other companies. Hakudo's management costs on these items are lower, as it buys them from other suppliers rather than processing them in house. Also, they carry no inventory costs. For these reasons, Hakudo includes other companies' inventory in its own product catalogs. Some 27,400 items are available for order via the Hakudo Network Service. Hakudo also encourages other companies in the industry to sell their products via this online site.

The company also handles special-order items, which are manufactured in collaboration with various material and parts manufacturers. In this category, the company offers aerospace-standard materials, custom mold bases, aluminum extrusion molds, custom-molded parts, castings, and forgings. The company also provides contract machining services.

The catalog also includes standard stock, backorder, and special-order items in various fields, in aerospace-standard, metal, and plastic materials.

Catalog of backorder and special-order items (Japanese only)

Product shipping and delivery

The company has a regular truck delivery service that it uses for the domestic market. The company also uses other trucking or parcel delivery services when delivery timing does not coincide with its regularly scheduled routes. To develop its nationwide sales and logistics network, the company requires detailed knowledge of the locations of customers' factories and other facilities. Accordingly, the company commonly uses local transporters who are familiar with the local geography.

The company uses ship or air transport to send products overseas. According to the company, its arrangements can reduce overseas transport by as much as six days compared with other companies' export methods. (The company calculates this

savings by cutting the time to provide a quotation from two—three days to one or on the same day, shortening packaging time from three—four days to one, and shipping on the same day rather than on the following day.)

Customers

Customer accounts

The company does not disclose the exact number of customer accounts or sales results by customer. However, the company's customer accounts numbered around 13,000 as of FY03/21, and more than 9,000 of these were for companies registered to use the Hakudo Network Service. Hakudo handles around 20,000 inquiries and invoice requests each day (total for phone, fax, email, and online). According to the company, online inquiries are increasing.

According to the company, about half of quotations lead to actual orders (the order rate). This factors in some degree of duplication with quotations. The transaction price is often cited as the reason for not placing an order. The company explains that it uses prevailing market prices as the starting point for setting transaction prices. It then works to convince the customer by presenting quotations in terms that match customer characteristics (necessary transportation method, payment method, and credit conditions).

Customers by industry

Aluminum is the material Hakudo handles most frequently. The company's main customers are manufacturers of semiconductor production equipment and related items. In FY03/22, these manufacturers accounted for about 45% of domestic revenue. While the company's products are supplied to component manufacturers, end customers include Tokyo Electron Ltd. (TSE Prime: 8035), ULVAC, Inc. (TSE Prime: 6728), and SCREEN Holdings Co., Ltd. (TSE Prime: 7735). Semiconductor production equipment has been in high demand since 2H FY03/21, due to a semiconductor shortage. As a result, this customer category has grown, to currently account for around 40% of revenue.

Demand for aluminum plate is high in the semiconductor production equipment industry. Aluminum alloy components are often used in semiconductor production equipment, such as vacuum chambers themselves, various parts in the chambers, and internal transport systems.

Aluminum is lightweight and offers corrosion resistance, machining accuracy, and low gas generation. Because of these characteristics, the company's aluminum materials are in demand from large Japanese manufacturers of semiconductor and LCD manufacturing equipment, as well as from overseas manufacturers of semiconductor production equipment.

Demand for semiconductor production equipment is expected to remain strong due to the shortage of semiconductors and the need to manage associated manufacturing risks. As a result, the company believes these manufacturers will be an important customer category for the foreseeable future. Meanwhile, greater semiconductor mounting density is driving the need for higher-precision products and more stringent delivery conditions. In response, the company is developing its own high-spec series of products with improved flatness and precision.

Manufacturers of OA equipment and other industrial machinery are another important customer segment. Large manufacturers of OA equipment, such as Canon Inc. (TSE Prime: 7751) and Ricoh Company, Ltd. (TSE Prime: 7752) are major customers. The standard stock items the company carries track trends in machine tool orders.

Source: Shared Research based on company data

The company reports segment information by geographic location. In FY03/21, Japan accounted for 95.2% of revenue. In addition, the company derives its revenue from China and other locations mainly from Japanese manufacturers doing business overseas; most of the company's customers are Japanese.

Japan

For the past 10 years, the Japan segment has consistently accounted for more than 95% of the company's sales. The company does not disclose data by customer. However, it supplies non-ferrous metal products to industrial equipment manufacturers and peripheral manufacturers. Of these, the company's main customers are manufacturers of precision instruments (semiconductor production and OA equipment). In FY03/21, demand for semiconductor production equipment increased due to a global semiconductor shortage. Typically, manufacturers of semiconductor and LCD production equipment in the past accounted for around 20% of the company's revenue. In FY03/22, however, the figure reached 45%. Aluminum plate is widely used in semiconductor production equipment, which has pushed up Hakudo's handling volume of this material.

China

This segment accounts for around 3% of revenue, or about JPY1.7bn for FY03/22. Main clients in this segment are Japanese companies doing business in China. The company transports products to these customers from Japan, by sea or air.

Others

The segment sells to the ASEAN region. As with China, sales are mainly to Japanese companies doing business locally.

Market and value chain

“Non-ferrous metal” is a catch-all term for metals other than iron. The reason for this classification is that iron is used in overwhelmingly greater quantities. There are many types of non-ferrous metals, each with different properties, but they can be broadly classified into three categories: base metals, precious metals, and rare metals. Non-ferrous metals are also added to steel to significantly change and improve its properties. Non-ferrous metals can be used on their own or as alloys with other non-ferrous metals.

Production of non-ferrous metals

Base metals are those that are produced in large quantities and for which large reserves exist. They are widely used in industrial materials and everyday items. Iron is also a base metal. Aluminum and copper are major non-ferrous base metals. Precious metals (such as gold, silver, and platinum) are used for jewelry, but they are also widely used as industrial materials. Rare metals (such as lithium, titanium, and nickel) are scarce, either because few reserves exist or because they are difficult to mine or extract.

The company mainly handles non-ferrous metals that are used in large quantities (mainly aluminum and copper). In FY03/22, aluminum accounted for 65.6% of handling volume, copper for 13.5%, stainless steel for 15.9%, and other materials including specialty steels for 5.0%.

Aluminum

High demand for aluminum stems from its numerous physical characteristics. For one, aluminum's specific gravity is 2.7, which is about one-third that of iron (7.8) and copper (8.9). Aluminum's strength doubles when other elements are added to form an alloy, hence increasing its specific strength. Even alloys of aluminum have approximately the same specific gravity as aluminum, as only small amounts of other elements are added. When exposed to air, aluminum forms a strong and stable oxide film, providing excellent corrosion resistance. Corrosion resistance can be improved further by anodizing, which artificially creates an oxide film. High ductility makes aluminum suitable for plastic working. It has a low melting point (660°C), which can be reduced further by eutectic alloying. This characteristic and its good flowability make aluminum suitable for casting.

Aluminum has high electrical and thermal conductivity. For the same mass, aluminum has twice the electrical conductivity of copper and three times the thermal conductivity of iron. Aluminum reflects more than 90% of radiant energy and has high light and heat reflectance. As its color resembles white, aluminum need not be painted. Being non-toxic, it can be used for packaging daily necessities, food, and medicine. Aluminum is non-magnetic and has excellent vacuum characteristics (low gas release rate even in vacuum). For this reason, aluminum is widely used in semiconductor production and LCD manufacturing equipment, which require some production processes to be conducted in a vacuum state. Aluminum is also highly recyclable; only 3% as much energy is needed to re-melt and recycle used products as is used in electrolytic refining.

Aluminum market prices are updated every three months.

Copper

Copper is widely used in electrical and electronic products due to its excellent thermal conductivity, electrical conductivity, workability, and ductility. “Copper” products may include products made solely from copper or alloys containing zinc (brass), tin and phosphorous (phosphor bronze), or nickel and zinc (nickel silver) before being melted, cast, rolled, drawn, or forged into plates, tubes, bars, wires, or other shapes.

Market prices for copper are updated daily.

Stainless steel

Stainless steel is a rust-resistant alloy consisting mainly of iron (more than 50%) and containing more than 10.5% chromium. In addition to being corrosion resistant, stainless steel offers heat resistance, workability, strength, and other characteristics, as well as being easy to maintain. It is also 100% recyclable.

When added to iron, the chromium combines with oxygen to form a thin protective film (passive film) on the surface of the steel. This passive film helps prevent rust. Although this film is thin (3 millionths of a millimeter), it is tough. If the film is broken, it regenerates automatically in the presence of oxygen.

Stainless steel is used in a wide range of applications, from general home applications to the nuclear power and space development sectors. Stainless steel can also be selected to match various performance requirements, such as corrosion resistance, heat resistance, strength, and formability.

Stainless steel prices are determined by negotiation between buyer and seller whenever manufacturers revise their prices.

Key customer trends

The company's main customers are manufacturers of semiconductor production equipment, OA equipment, and other industrial equipment. A shortage of semiconductors and the uneven distribution of manufacturing locations have become a problem, and the global system of semiconductor production is being reconfigured as a result. Consequently, the company expects demand for semiconductor fabrication equipment to grow steadily for the foreseeable future. In relation to other equipment, orders for the company's standard stock items tend to track orders for machine tools. In the category of industrial machinery, demand for non-ferrous materials is growing in line with efforts to reduce environmental impact.

Main competitors

Hakudo is a trading company specializing in non-ferrous metals (aluminum, copper, and stainless steel) and handling plastics and other metals. One competitor category is sales companies affiliated with materials manufacturers that maintain trading company functions. Examples include Nippon Steel Trading Corporation (TSE Prime: 9810), which is affiliated with Nippon Steel Corporation (TSE Prime: 5401), and JFE Shoji Corporation (unlisted), which is a group company affiliated with JFE Holdings, Inc. (TSE Prime: 5411). Steel is also handled by general trading companies, due to the large quantities involved.

Such relationships also exist between manufacturers of non-ferrous materials (which are handled in smaller quantities) and sales subsidiaries. Manufacturer-affiliated trading companies include SDAT Co., Ltd. (unlisted), a group company of Showa Denko KK (TSE Prime: 4004). Some trading companies are affiliated with general trading companies, such as Itochu Metals Corporation (unlisted), which is affiliated with Itochu Corporation (TSE Prime: 8001), and Marubeni Metals Corp. (unlisted), a group company of Marubeni Corporation (TSE Prime: 8002). Hakudo is different, being unaffiliated with any manufacturer or general trading company. Rather, Hakudo exists independently, having expanded from its origins as a privately owned firm.

Rather than dealing only with specific materials, Hakudo handles a variety (including aluminum, copper, stainless steel, and plastic). Hakudo also differs in the way it positions itself. Hakudo sees itself as a convenience store for non-ferrous metals. In addition to cutting materials to standard shapes and sizes, it handles other companies' products, offering a wide range of items that can be ordered 24 hours a day.

We have compared Hakudo with listed companies that conduct similar activities. Alconix Corporation (TSE Prime: 3036) and UEX, Ltd. (TSE Standard: 9888) are similar to Hakudo in that they also have a processing function.

Source: Shared Research based on company data

Hakudo's revenue is the smallest among the six companies. This reflects the fact that Onoken Co., Ltd. (TSE Prime: 7414) and Shinsho Corporation (TSE Prime: 8075) mainly handle steel and construction materials. Alconix handles a large volume of rare earth materials. Although specializing in stainless steel, UEX's business model is relatively close to Hakudo's. Another company that could be considered a competitor with a similar business model is Shinx Corporation (unlisted, FY03/20 revenue of JPY10.1bn), which was established by former Hakudo employees and specializes in aluminum materials.

Misumi Group Inc. (TSE Prime: 9962) is comparable to Hakudo because it has established a trading company function to support manufacturing through its VONA (Variation & One-stop by New Alliance) strategy. This function is like Hakudo's backorder items business. Like the Misumi Group, MonotaRO Co., Ltd. (TSE Prime: 3064) has a business model of supplying materials to construction sites.

Hakudo's OPM is higher than all except Misumi Group and MonotaRO. Shared Research understands that Hakudo generates higher margins by offering a combination of products and services, adding value through quality and delivery times.

Hakudo is among the smallest in terms of assets; UEX is around the same size. UEX, however, specializes in stainless steel. Although Hakudo also handles stainless steel, it has diversified into other areas, focusing on aluminum and copper. In addition, profitability is currently higher because of strong demand for aluminum sheet materials from manufacturers of semiconductor fabrication equipment. As a result, Hakudo has a higher return on assets than UEX.

Strengths and weaknesses

Strengths

In addition to its inventory function (as a trading company), the company has a processing function, which helps lower customers' manufacturing costs.

Hakudo has a variety of processing capabilities that other specialized trading companies lack. Customers can take advantage of these capabilities to have Hakudo process materials for them, as well as to stock these materials. This arrangement can reduce manufacturing time and costs for customers. Customers typically place small orders (15kg to 20kg per order); maintaining their own processing equipment for batches of this size would be costly. In addition to cutting, Hakudo can mill and machine shaped parts, handling complex and detailed work to highly accurate tolerances, which can help reduce manufacturing costs for customers. The company has 30 types of metalworking machines at its five factories in Japan. A nationwide network is in place to provide processing services in all regions. These processing services allow the company to charge higher transaction prices. As a result, OPM is higher for Hakudo (around 5%) than for other specialized trading companies (around 2% for Alconix, UEX, and Shinsho Corporation).

The Hakudo Network Service is a highly convenient service that enables immediate order placement and delivery, using such data as market prices, processing costs, and customer information.

According to Hakudo, it is one of only two non-ferrous trading companies in Japan that have a 24-hour online system for ordering. (The other company is Shinx Corporation [unlisted], which was established by former Hakudo employees.) Hakudo handles a wide range of non-ferrous metals, such as aluminum and copper. Customers can get quotations and place orders for products regardless of office hours, which is convenient and reduces ordering costs. The company's online service tailors quotations to specific order details and is based on the company's own inventory of standard stock items, other companies' products it handles, and accumulated data (on current material prices, processing costs, customer order history, and credit information). More than 10,000 companies are registered users of the Hakudo Network Service. According to the Japan Economic Census (2016), Japan has 20,651 manufacturers of production machinery and equipment. A simple calculation suggests that around 48% of these companies use the online service. Hakudo is inviting other companies in its industry to use the system as well, turning Hakudo Network Service into an online platform for non-ferrous materials.

Accumulated customer data allows the company to manage inventories and control processing costs.

Hakudo led its competitors in introducing a computerized system (in 1968) and developing a database. After repeated improvement and more than 50 years of using the system, Hakudo has accumulated information on 13,000 (mainly Japanese) customers. This information includes order histories, payment terms, and credit information. The company uses this database to calculate customer-specific transaction prices (including shipping fees). The system allows the company to adjust its sourcing volumes based on perceived customer trends, identify methods of processing from base materials (as sourced) into end materials (in inventory after processing), and optimize inventory management. This system is also used to manage processing costs by calculating how to shape source materials (at the point of sourcing) to minimize scrap.

Weaknesses

The company is susceptible to volatility in raw material prices, as it handles non-ferrous materials for specific customer segments.

Hakudo handles various non-ferrous materials, centering on aluminum and copper. The company processes these materials into standard stock items that it sells based on market prices at the time transactions occur. Most customers are manufacturers of precision industrial and electrical equipment (such as semiconductor production and OA equipment), which use a large amount of components made of these materials. If raw material prices decline while products are in inventory, the company can incur inventory valuation losses. This situation is amplified during recessions following demand expansion, when market prices and sales decline at the same time. In FY03/20, the company incurred a loss of JPY170mn due to such a difference in market value, equivalent to around 10% of recurring profit for the year (of JPY1.7bn). The company is particularly sensitive to fluctuations in market prices on aluminum and copper, which are in high demand among its customers.

A focus on small order quantities and rapid deliveries makes it difficult to achieve economies of scale in logistics and control logistics costs.

The company provides detailed delivery services to its customers, but orders are small compared with companies that handle steel products in bulk. (Shared Research estimates that orders average JPY22,000 in FY03/22). This situation can cause transportation expenditure to rise. Transportation expenses account for a larger proportion of SG&A spending (32.5% over the past three years) than personnel expenses, which are typically high at trading companies. Looking at similar companies over the same three-year period, the figure was 12.1% for UEX. (Alconix does not disclose transportation as a key expense category.) The company seeks to differentiate itself by the convenience its “exceptional speed” provides, but this can lead to substantial delivery costs because orders are often small (averaging 15kg to 20kg), and the company handles around 10,000 orders per day. The company has its own regular truck service, but the number of items and delivery conditions vary from customer to customer, so the company also uses courier services as well as overseas sea and air transport services. As a result, transportation expenses tend to be higher than other companies.

The company has limited ability to meet the needs of Japanese customers that are expanding overseas.

While Japanese manufacturers are shifting their production bases overseas, Hakudo is applying the business model it has developed in Japan (sales activities and processing plants) to its Japanese customers that are developing business overseas. In other words, Hakudo is attempting to extend its domestic business by exporting from Japan. This situation makes it difficult for Hakudo to showcase the strengths that differentiate the company from competitors in Japan through services that meet the demands of local customers. As existing customers shift more production overseas, they will begin to require the same level of sophistication there as they do in Japan. To satisfy this need, they are likely to expand relationships with local companies. Hakudo currently has overseas sales companies in China, Thailand, and Vietnam, but its partners in those countries have less extensive processing capabilities than those in Japan. Overseas, the company faces different operating environments and business customs from Japan. To leverage the business it has built in Japan, the company will need to re-establish sales, processing, and cost management systems tailored to local markets.

Source: Shared Research based on company data

Note: Figures may differ from company materials due to differences in rounding methods.

In the decade leading up to FY03/19, revenue trended upward consistently. In FY03/20 and FY03/21, revenue declined due to the global economic impact of the COVID-19 pandemic, but recovered sharply in FY03/22 thanks to strong investment in equipment for semiconductors.

Operating profit has hovered between 5% and 6%; the trading company business makes it difficult to leverage operating profit by increasing sales. For pure trading companies, OPM tends to average between 1% and 2%. However, Hakudo also offers a processing service that machines products to customer specifications. This arrangement allows the company to generate higher profit margins by setting its own prices, based on customer requirements and characteristics in addition to market prices.

SG&A spending run to around 11% of revenue. Transportation expenses account for more than 30% of this amount, which is even higher than personnel expenses (typically the largest expense item for a trading company). Shared Research understands that the increase in transportation expenses is connected to the way the company's sale structure emphasizes delivery.

Note: Figures may differ from company materials due to differences in rounding methods.

Over the past decade, assets have expanded nearly in lockstep with revenue, with trade receivables and payables both growing. Assets increased due to capex around FY03/18. Performance declined in FY03/20 and FY03/21 and assets remained almost unchanged, but they began to expand again in FY03/22 as performance began to recover.

Cash and deposits have been accumulating steadily, so working capital is essentially self-financed. The company has focused on remaining debt-free. Over the past 10 years, the company has had virtually no interest-bearing debt, except for a loan in FY03/19.

Notes: Figures may differ from company materials due to differences in rounding methods.

Cash flows from operating activities

Over the past 10 years, operating activities have been a net source of cash, mostly in line with sales growth. The company explains that it handles nearly 20,000 inquiries and estimates each day, and around half of these result in orders. Orders are based on market prices. The company adds fees for extra services it provides and specifies the transaction price as the sum of these figures. Due to this methodology, most of the company's orders generate profit equivalent to the company's added value. Accordingly, the company has posted stable pre-tax net income, although fluctuating in tandem with sales changes.

Cash flows from investing activities

Over the past 10 years, investing activities have typically used cash. The company differentiates itself from competitors through the ability to provide standard products immediately (by having them fully stocked), and the ability to perform complex and highly precise machining functions as requested by customers. To maintain and strengthen these characteristics, the company has five factories in Japan that serve as both warehouses for inventory products and processing plants. Investment to manage inventories, purchase metalworking machines with new functions, and preparing for overseas expansion is ahead of schedule.

Cash flows from financing activities

Financing activities have been a net use of cash in each of the past 10 years. Cash flows from financing activities have essentially paralleled dividend payments. However, expenditures exceeded dividend payments in FY03/15 (due to the repurchase of treasury stock) and in FY03/20 (due to the repayment of long-term debt). In FY03/22, total dividends doubled, boosting shareholder returns with two dividend payments and higher year-end dividends.

Historical performance

Full-year FY03/22 results

Summary

- Revenue: JPY55.4bn (+41.4% YoY)
- Operating profit: JPY4.3bn (+114.7% YoY)
- Recurring profit: JPY4.4bn (+109.9% YoY)
- Net income attributable to owners of the parent: JPY3.0bn (+131.2% YoY)

Changes in market conditions and demand

The Hakudo group's performance is affected substantially by demand for semiconductor production equipment. Capex in this industry has been robust, spurred by increase in demand for 5G and data centers. In addition, despite some risk from the semiconductor shortage, the orders situation is improving in the machine tool sector, centering on exports. Capex remains sluggish, however, in the aircraft sector.

Given the constraints on customer visits and face-to-face sales, the company continued to promote the use of its 24/7 quotation and ordering website (Hakudo Network Service) and remote sales tools. These efforts helped the company to prevent customer service from deteriorating significantly. The company also worked to substantially increase the number of items listed on Hakudo Network Service (from 21,200 at end-March 2021 to 32,700 as of end-March 2022) and make the site more convenient. Revenue from three consolidated subsidiaries (AQR Co., Ltd., Shanghai Hakudo Precision Materials Co., Ltd., and Hakudo (Thailand) Co., Ltd.) also increased YoY.

Financial results: Substantial increase in sales and profit

Owing to efforts to enhance customer satisfaction and expand the scale of business, revenue grew 41.4% YoY.

As of end-March 2022, market prices for key raw materials included JPY1,330,000/t for electrolytic copper (+29.1% from end-March 2021), JPY488,000/t for aluminum ingots (Nikkei monthly average; +66.0% from end-March 2021), JPY500,000/t for stainless steel (Japan Metal Daily median; +31.6% from end-March 2021). All continue their upward trends.

Under these market conditions, revenue grew 41.4% YoY. Demand increased for all products, and especially aluminum, the company's mainstay, against a backdrop of strong demand for capital investment in the semiconductor production equipment industry. Aluminum generated JPY36.4bn (+41.8% YoY), copper JPY7.5bn (+47.0% YoY), stainless steel JPY8.8bn(+35.0% YoY), and other materials JPY2.8bn (+42.3% YoY). As a result of the higher sales of semiconductor production equipment, the percentage of special order items increased to 35.7% (+1.7pp YoY), with standard stock items at 64.3% (-1.7pp YoY).

Gross profit rose to JPY10.3bn (+54.6% YoY), and GPM increased to 18.6% (+1.6pp YoY), on growth in revenue and favorable market conditions. SG&A expenses rose 29.1% YoY to JPY6.1bn, driven by higher personnel and transportation expenses. However, upon review of various expenses including transportation, the company's SG&A-to-sales ratio declined 1.2pp YoY. As a result, operating profit rose 114.7% YoY and OPM increased to 7.7% (+2.6pp YoY). Gains on inventory revaluation were JPY610mn in FY03/22, with a JPY566mn upward impact on profit.

Performance by segment

- Japan: Segment revenue of JPY52.8bn (+41.5% YoY), operating profit of JPY4.1bn (+111.4% YoY)
- China: Segment revenue of JPY1.7bn (+26.1% YoY), operating profit of JPY70mn (+233.3% YoY)
- Others: Segment revenue of JPY882mn (+72.6% YoY), operating profit of JPY81mn (+326.3% YoY)

Hakudo's reporting segments indicate where their earnings were generated. Its Japan segment includes results stemming from the parent company and AQR Corporation, while its China segment reflects the performance of Shanghai Hakudo Precision Materials Co., Ltd. Its Others segment indicates earnings from Hakudo (Thailand) Co., Ltd., as well as its ongoing collaboration with Oristar Corporation in Vietnam.

Cumulative Q3 FY03/22 results

Summary

- Revenue: JPY40.5bn (+45.6% YoY)
- Operating profit: JPY3.1bn (+163.6% YoY)
- Recurring profit: JPY3.2bn (+156.9% YoY)
- Net income attributable to owners of the parent: JPY2.2bn (+151.7% YoY)

Changes in market conditions and demand

The Hakudo group's performance is affected substantially by demand for semiconductor production equipment. Capex in this industry has been robust, spurred by increase in demand for 5G and data centers. In addition, despite some risk from the semiconductor shortage, the orders situation is improving in the machine tool sector, centering on exports. Capex remains sluggish, however, in the aircraft sector.

Given the constraints imposed by rising COVID-19 infections on customer visits and face-to-face sales, the company continued to promote the use of its 24/7 quotation and ordering website (Hakudo Network Service) while utilizing more remote sales tools. These efforts helped the company to prevent customer service from deteriorating significantly. The company also worked to substantially increase the number of items listed on Hakudo Network Service (from 15,500 at end-

March 2020 to 27,600 as of end-December 2021) and make the site more convenient. Revenue from three consolidated subsidiaries (AQR Co., Ltd., Shanghai Hakudo Precision Materials Co., Ltd., and Hakudo (Thailand) Co., Ltd.) also increased YoY.

Financial results: Substantial increase in sales and profit

Owing to efforts to enhance customer satisfaction and expand the scale of business, revenue grew 45.6% YoY.

Aluminum generated JPY26.5bn in revenue (+45.5% YoY), while copper yielded JPY5.6bn (+54.8% YoY), stainless steel JPY6.4bn (+38.1% YoY), and other materials JPY2.0bn (+48.5% YoY). Revenue generated through standard stock items rose about 38% YoY, and growth in sales prices (parent basis) accounted for about nine points of this increase, while expansion in sales volume was responsible for about 29 points.

Revenue growth thus was fueled by increased volume, which in turn reflected stronger demand from sectors including semiconductor production equipment and machine tools. As of end-December 2021, market prices for key raw materials included JPY1,140,000/t for electrolytic copper (+10.7% from end-March 2021), JPY375,000/t for aluminum ingots (Nikkei monthly average; +27.6% from end-March 2021), JPY450,000/t for stainless steel (Japan Metal Daily median; +18.4% from end-March 2021). In short, all have risen.

At the profit level, gross profit rose to JPY7.6bn (+65.4% YoY) despite a rise in processing fees and labor costs accompanying increased revenue. GPM increased to 18.7% (+2.2pp YoY), largely on the strength of growth in revenue. SG&A expenses rose 31.0% YoY to JPY4.4bn on an increase in labor costs including performance-linked bonuses and higher freight costs, but the SG&A-to-sales ratio declined 1.2pp YoY. The impact of inventory revaluation was a JPY422mn gain reflecting increases in raw material costs and manufacturers' processing fees, as compared with a JPY26mn loss in Q3 FY03/21. As a result, operating profit rose 163.6% YoY and OPM increased to 7.7% (+3.4pp YoY). Recurring profit was a record high for cumulative Q3.

Performance by segment

- Japan: Segment revenue of JPY38.5bn (+45.8% YoY), operating profit of JPY3.0bn (+160.6% YoY)
- China: Segment revenue of JPY1.3bn (+28.9% YoY), operating profit of JPY60n (+122.2% YoY)
- Others: Segment revenue of JPY659mn (+77.6% YoY), operating profit of JPY77mn (+600.0% YoY)

Hakudo's reporting segments indicate where its earnings were generated. Its Japan segment includes results stemming from the parent company and AQR Corporation, while its China segment reflects the performance of Shanghai Hakudo Precision Materials Co., Ltd., and its Others segment indicates earnings from Hakudo (Thailand) Co., Ltd. Hakudo anticipates that its collaboration with Oristar Corporation in Vietnam will continue.

In the Japan segment, both the parent company and AQR posted stronger sales, especially in aluminum products for the semiconductor production equipment sector. The China segment benefited from increased demand from local makers of semiconductor production equipment, electric vehicles, and machine tools. Sales also increased at Hakudo (Thailand) Co., Ltd., the core company in the Others segment, amid growth in new customers numbers (including local companies) and a recovery in demand from the automotive sector.

1H FY03/22 results

Summary

- Revenue: JPY25.8bn (+44.8% YoY)
- Operating profit: JPY1.9bn (+232.8% YoY)
- Recurring profit: JPY2.0bn (+223.3% YoY)
- Net income attributable to owners of the parent: JPY1.4bn (+216.6% YoY)

Changes in market conditions and demand

The Hakudo group's performance is affected substantially by demand for semiconductor production equipment. Capex in this industry has been robust, spurred by increase in demand for 5G and data centers. In addition, the orders situation is improving in the machine tool sector, centering on exports. Capex remains sluggish, however, in the aircraft sector.

Given the constraints on customer visits and face-to-face sales, the company continued to promote the use of its 24/7 quotation and ordering website (Hakudo Network Service) and remote sales tools. These efforts helped the company to prevent customer service from deteriorating significantly. The company also worked to substantially increase the number of items listed on Hakudo Network Service (from 15,500 at end-March 2020 to 22,500 as of end-September 2021) and make the site more convenient. Revenue from three consolidated subsidiaries (AQR Co., Ltd., Shanghai Hakudo Precision Materials Co., Ltd., and Hakudo (Thailand) Co., Ltd.) also rose, lifting overall revenue.

Financial results: Substantial increase in sales and profit

Owing to efforts to enhance customer satisfaction and expand the scale of business, revenue grew 44.8% YoY. In the semiconductor production equipment industry, which constitutes the company's main customer base, capital investment was strong due to expansion in semiconductor demand associated with next-generation 5G communication standards and data centers. As a result, the company observed robust demand for all of its aluminum components, which are widely used in semiconductor production equipment. According to the company's estimates, sales of products related to semiconductor production equipment account for about 40% of total revenue at present.

Aluminum generated JPY16.9bn in revenue (+45.2% YoY), while copper yielded JPY3.5bn (+55.8% YoY), stainless steel JPY4.1bn (+35.6% YoY), and other materials JPY1.3bn (+42.1% YoY). Special-order items accounted for a higher percentage of overall revenue (35.6%) than in 1H FY03/21 (32.5%), while standard stock items generated a lower share at 64.4% (versus 67.5% in 1H FY03/21). Non-consolidated revenue generated through standard stock items rose about 39% YoY, and growth in sales prices per unit accounted for about nine points of this increase, while expansion in sales volume was responsible for about 30 points.

Gross profit rose to JPY4.8bn (+73.1% YoY), and GPM increased to 18.8% (+3.1pp YoY), as growth in revenue (upward impact of JPY2.2bn on profit) and gains on inventory revaluation (upward impact of JPY373mn on profit) compensated for higher manufacturing costs (+JPY511mn YoY) stemming mainly from elevated personnel expenses. SG&A expenses rose 31.2% YoY to JPY2.9bn due to increases in personnel expenses and freight costs, but the company's SG&A-to-sales ratio declined 1.1pp YoY. As a result, operating profit rose 232.8% YoY. The upward impact of JPY373mn stemming from inventory revaluation occurred because the company reported a JPY114mn loss on inventory revaluation in 1H FY03/21 and a JPY259mn gain on inventory revaluation in 1H FY03/22. As of end-September 2021, bullion prices associated with the company's core products continued to rise.

Performance by segment

- Japan: Segment revenue of JPY24.6bn (+45.3% YoY), operating profit of JPY1.8bn (+230.0% YoY)
- China: Segment revenue of JPY821mn (+25.7% YoY), operating profit of JPY38mn (+137.5% YoY)
- Others: Segment revenue of JPY419mn (+58.1% YoY), operating profit of JPY52mn (+940.0% YoY)

Hakudo's reporting segments indicate where its earnings were generated. Its Japan segment includes results stemming from the parent company and AQR Corporation, while its China segment reflects the performance of Shanghai Hakudo Precision Materials Co., Ltd., and its Others segment indicates earnings from Hakudo (Thailand) Co., Ltd. Hakudo anticipates that its collaboration with Oristar Corporation in Vietnam will continue.

Q1 FY03/22 results

Summary

- Revenue: JPY12.6bn (+35.0% YoY)
- Operating profit: JPY990mn (+243.0% YoY)
- Recurring profit: JPY1.0bn (+232.8% YoY)
- Net income attributable to owners of the parent: JPY718mn (+233.0% YoY)

The Hakudo group's performance is affected substantially by demand for semiconductor production equipment. Capex in this industry has been robust, spurred by expansion related to 5G and data centers. In addition, the orders situation is improving in the machine tool sector, centering on exports. Capex remains sluggish, however, in the aircraft sector.

Given the constraints on customer visits and face-to-face sales, the company continued to promote the use of its 24/7 quotation and ordering website (Hakudo Network Service) and remote sales tools. These efforts helped the company prevent

customer service from deteriorating significantly. The company also worked to substantially increase the number of items listed on Hakudo Network Service (from 15,500 at end-March 2020 to 21,900 as of end-June 2021) and make the site more convenient. Revenue from three consolidated subsidiaries (AQR Co., Ltd., Shanghai Hakudo Precision Materials Co., Ltd., and Hakudo (Thailand) Co., Ltd.) also rose, lifting overall revenue. Owing to efforts to enhance customer satisfaction and expand the scale of business, revenue grew substantially year on year.

Operating profit rose 243.0% YoY. This increase was due mainly to higher revenue, a lower cost of sales ratio, and the impact of raw materials prices. In Q1 FY03/21, the market loss on merchandise inventories was JPY51mn. In Q1 FY03/22, the market gain was JPY104mn.

Performance by segment

- Japan: Segment revenue of JPY12.0bn (+35.2% YoY), operating profit of JPY940mn (+264.3% YoY)
- China: Segment revenue of JPY419mn (+31.3% YoY), operating profit of JPY15mn (-25.0% YoY)
- Others: Segment revenue of JPY197mn (+30.5% YoY), operating profit of JPY33mn (+266.7% YoY)

Company announces medium-term management plan covering FY03/23–FY03/25

2022-05-31

On May 30, 2022, Hakudo Co., Ltd. announced a medium-term management plan covering FY03/23–FY03/25.

On the same day, the company announced that it has formulated a medium-term management plan covering FY03/23–FY03/25.

In the final year of the plan, the company aims to achieve revenue of JPY71.8bn and recurring profit of JPY5.4bn as management targets, ROIC of 15% and operating cash flow of JPY4.7bn as key financial plan indexes, and a dividend payout ratio of 40% as shareholder return policy. The company has already held a presentation for investors on May 26.

Revisions to its earnings and dividend forecasts

2021-12-08

On December 8, 2021, Hakudo Corporation announced revisions to its earnings and dividend forecasts.

Revenue: JPY54.3bn (previous forecast JPY52.0bn)

- Revenue: JPY54.3bn (previous forecast JPY52.0bn)
- Operating profit: JPY4.1bn (JPY3.4bn)
- Recurring profit: JPY4.2bn (JPY3.5bn)
- Net income: JPY2.9bn (JPY2.4bn)
- EPS: JPY251.28 (JPY211.61)
- Annual dividend per share: JPY110.00 (JPY96.00)

Reason for revisions

The company expects higher sales growth compared to its initial forecast due to larger demand in the semiconductor production equipment industry, the company's main area of business. It also expects selling prices and gains on inventory revaluation to increase along with the rise in market prices for aluminum, copper, and other materials.

Based on its revised full-year forecast, Hakudo changed the year-end dividend amount to JPY62.00 per share from the previously planned JPY48.00 per share and accordingly changed the annual dividend amount to JPY96.00 per share from JPY110.00 per share.

Other information

History

Year	Month	
1932	Feb.	Hakudo Shoten was founded as private business Kyobashi-ku (now Hachobori, Chuo-ku), Tokyo.

Corporate governance and top management

Corporate governance

Based on its corporate philosophy, the company aims to ensure management transparency, fairness, and disclosure in order to achieve management efficiency and sustainable growth.

The company's Board of Directors is chaired by the president and consists of nine directors (including five outside independent directors). In principle, the Board of Directors meets regularly on a monthly basis, holding extraordinary meetings as necessary. The board decides on important management matters in accordance with laws and ordinances, the Articles of Incorporation, and the Board of Directors regulations. The board also supervises the execution of duties by directors.

The Nomination and Remuneration Advisory Committee is an advisory body to the Board of Directors and consists of outside independent directors. This ensures transparency and objectivity in the appointment and remuneration of directors.

The company has an Audit and Supervisory Committee, with outside independent directors making up the majority of members. The aims of this committee are to further strengthen the supervisory function of the Board of Directors over management and corporate governance, and to enhance the soundness and efficiency of management.

The Audit and Supervisory Committee has four members (three outside independent directors), including its chair. In principle, the committee meets regularly on a monthly basis, holding extraordinary meetings as necessary. Members of the Audit and Supervisory Committee liaise with the Internal Audit Department and the accounting auditor, supervising the decision-making process of the Board of Directors and the status of business execution.

The head of the Internal Audit Department periodically audits the business activities of each division, including subsidiaries, for effectiveness, accuracy, and compliance, and reports to the president and the Audit and Supervisory Committee.

Business execution centers on management meetings attended by full-time directors and division heads, and department head meetings attended by full-time directors, division heads, and departmental managers. The company has also established the Risk Management Committee and other committees.
